Neurocritical care is a new sub-specialty that has led to improved outcomes for adults with neurological illnesses. Neonatal neurocritical care (also called neuro-intensive or brain focused care) is a sub-specialty that has developed in response to the adult model. I will discuss recent advances in neonatal brain care and how our team is working to apply brain focused care to improve developmental outcomes for neonates at UCSF.

Hannah Glass, MDCM, MAS, Associate Professor of Clinical Neurology & Pediatrics, UCSF
